

ADMIN PORTAL

TOP RATED CARD COMPANY

Administrator's Manual

A complete, screen-by-screen guide to running the store from the admin portal — inventory, singles, orders, customers, staff accounts, and payment setup.

Site: topratedcc.netlify.app/admin · **Audience:** Store owner & staff (admin role)

Version: Reflects the deployed build as of July 12, 2026 · **Portal sections:** 7

Contents

1	Getting Started	Signing in, roles, and finding your way around
2	Daily Dashboard	Today's sales, orders, stock, and recent activity
3	Inventory	The main catalog — search, flags, prices, editing
4	Custom Inventory (Singles)	Listing individual cards with photos
5	Orders	The order management screen
6	Customers	The customer directory and loyalty tiers
7	Users & Staff	Creating accounts and managing roles
8	Integrations (Clover Payments)	Connecting the store to Clover
9	Quick Reference & Common Tasks	"How do I..." at a glance
10	Troubleshooting & Glossary	Fixes, definitions, and appendices

A note on this edition. Throughout the manual, each screen is marked **LIVE DATA** (wired to the real store database), **PARTIAL** (works, with gaps), or **PREVIEW** (sample data / controls not yet active), so you always know whether what you see is real.

1 Getting Started

The admin portal is where you run the store: manage stock and prices, list individual cards, review customers and orders, add staff, and connect payments. It lives at `/admin` and is visible only to accounts with the **admin** role.

1.1 Signing in

1. Go to the store and open **Sign In** (the `/login` page).
2. Enter the email and password for your **admin** account.
3. Once signed in, an **Admin** button (with a dashboard icon) appears in the top navigation bar. Click it to enter the portal.

ACCESS IS ENFORCED ON THE SERVER

You must be both **signed in** and an **admin** to see any admin page. Visitors who aren't logged in are sent to the sign-in page (and returned to `/admin` afterwards); signed-in customers who aren't admins are redirected to their account page. The "Admin" button in the top bar simply doesn't appear for non-admins.

1.2 Understanding roles

Role	What it can do
Admin	Full access to the admin portal and every screen in this manual. This is the role for you and your staff.
Customer	A normal shopper account. Can browse, order, and see their own account — but never the admin portal.

You promote or demote accounts between these two roles on the **Users** screen (Section 7).

1.3 The portal at a glance

Every admin screen shares the same layout: a fixed **sidebar** on the left (titled "Admin Portal") and your content on the right. The section you're currently viewing is highlighted in red. A red **ADMIN** marker in the top bar reminds you that you're working in the back office, not the storefront.

ORDERS TODAY

—

OUT OF STOCK

—

Content area — changes with the section you pick on the left.

The seven sections

Sidebar item	Purpose
Daily Dashboard	Your morning snapshot — sales, orders, stock, and recent activity.
Inventory	The full product catalog: search, set store flags, edit names/prices/images.
Custom Inventory	List and manage individual single cards, with photos.
Orders	The order-management screen.
Customers	A read-only directory of everyone who has an account, with loyalty tiers.
Users	Create, edit, and remove accounts; change roles; reset passwords.
Integrations	Connect the store to Clover for card payments.

WORKS ON YOUR PHONE

The portal is built to be used from a phone as well as a desktop — which matters most when photographing and listing single cards (Section 4). On a narrow screen the layout stacks so everything stays reachable.

2 Daily Dashboard LIVE DATA

The landing screen. It shows today's date and four headline numbers pulled from the real store database, followed by your most recent order activity.

2.1 The four metric cards

Card	What it counts
Sales Today	The total dollar value of all orders placed since midnight today. The sub-line shows how many orders that is.
Orders Today	The number of orders placed since midnight.
Out of Stock	How many products are currently flagged out of stock. Reads "All in stock" when the count is zero, or "Needs restock" when it isn't.
Customers	The total number of registered customer accounts.

2.2 Recent Activity

Below the cards, a table lists your **six most recent orders** — order number, customer name (taken from the shipping details, or "Guest" for guest checkouts), a colored status badge (*Pending*, *Processing*, or *Shipped*), and the amount. If no orders exist yet, it simply reads "No orders yet."

2.3 The "Demo mode" tools

ONLY APPEARS WHILE PAYMENTS ARE IN MOCK MODE

When the Clover payment integration is set to **Mock** (its default — see Section 8), a small **Demo mode** badge and a **Delete demo orders** button appear near the top of the dashboard. This lets you clear out test checkouts so they don't clutter your real figures. It deletes **only** demo orders (those whose number starts with `DEMO-`) — never a real customer order — and asks you to confirm first. Once you switch payments to Live, this tool disappears.

USE IT AS YOUR DAILY OPEN

Check the dashboard first thing: glance at Sales/Orders Today, and if "Out of Stock" says "Needs restock," head to Inventory to see what needs attention.

3 Inventory LIVE DATA

The main catalog — your sealed boxes, singles from the bulk import, and supplies. Here you search the whole catalog, flip the flags that control how items appear on the storefront, and edit an item's name, description, price, and image.

The header shows the section title, the subtitle "Manage Inventory, Prices, and Store Flags," and a **Total Items** count so you always know how big the catalog is.

3.1 Finding a product

A filter bar sits above the table:

Control	What it does
Search box	Type any part of a product's name , subcategory , or ID to narrow the list instantly.
Category dropdown	Limit the list to one category (or "All categories").
Type dropdown	Filter by product type: Sealed Boxes , Singles , or Supplies & Extras (or "All types").
"X of Y" count	Shows how many items match versus the total.
Clear	Appears once any filter is active; resets search, category, and type in one click.

3.2 The store flags

Each row has four one-click toggle buttons. Clicking a toggle saves immediately to the store — the row dims briefly while it saves, then updates. There's no separate "save" step for flags.

Flag	Button	Effect on the storefront
Sale	ON / OFF	Marks the item as on sale.
Featured	ON / OFF	Highlights the item in featured placements.
New	ON / OFF	Badges the item as a new release.
OOS	OOS / IN	Out of stock. When ON, the storefront shows an "Out of Stock" badge and disables the Add-to-Cart button so it can't be purchased.

Inventory							432 of 433
Search...	All categories ▼	All types ▼					
Name	Category	Price	Sale	Feat.	New	OOS	Actions
Topps Chrome Hobby Box	sports	\$440.00	OFF	ON	ON	IN	Edit
Phoenix Blaster	sports	\$35.00	ON	OFF	OFF	OOS	Edit

TOGGLES FIRE IMMEDIATELY — AIM CAREFULLY

A flag changes the moment you click it; there's no undo prompt. If you toggle the wrong row, just click the same button again to switch it back.

3.3 Editing a product

Click **Edit** on any row to open the editor. You can change:

- **Name** and **Description**
- **Price** (in dollars)
- **Image** — a live preview is shown. Use the **Search for Image** button to find a picture, or the small **info (i)** button to reveal a field where you can paste an image link directly.
- **Representative image** checkbox — tick this when the photo is a close stand-in rather than the exact item; shoppers then see a "Representative image" note.

Click **Save Changes** to apply, or **Cancel** to discard.

ADDING & DELETING ON THIS SCREEN

The main Inventory list is fed by your bulk catalog and is built for *maintaining* existing products — it doesn't have "Add" or "Delete" buttons. To create and remove individual cards yourself, use **Custom Inventory** (Section 4).

4 Custom Inventory — Singles LIVE DATA

This is where you list individual cards yourself — snap a photo, fill in the details, and it's on the store. It's the most hands-on screen and the one designed to be used from your phone at the counter.

The header reads "Custom Inventory" with a subtitle counting how many singles are listed. An **Add Single** button sits at top right.

WHAT COUNTS AS A "SINGLE"

A single is a **non-sealed trading card** in a card category (sports or TCG) — an individual card, not a sealed box, accessory, or supply item. Items you add here show up grouped by category.

4.1 Browsing your singles

- A **search box** filters by card name or category as you type.
- Cards are **grouped by category**, and each group header shows how many are in it.
- Each row shows a **thumbnail** (or a "No photo" placeholder), the card's name, its subcategory and price, and an "Out of stock" note if flagged.
- Row actions: the **pencil** opens the editor; the **trash** deletes the card (and its photos) after a confirmation.

4.2 Adding a single

Click **Add Single**. The form is organized top-to-bottom so the fastest path is simply to take a photo and fill in three required fields.

Photos (the top section)

The photo tools come first because they're the part that should feel effortless on a phone:

Button	What it does
Take Photo	On a phone, opens the rear camera directly — shoot the card and it uploads instantly.
Add Photos	Opens your photo library / file picker; you can select several at once.
Search for Image	Finds a stock/reference image online if you'd rather not shoot one.
Drag & drop	On a desktop, drag image files straight onto the drop zone.

Uploaded photos appear as thumbnails. The **first photo is the Primary** (used as the store thumbnail); on any other photo, click **Make primary** to promote it, or the **×** to remove it. Photos are automatically shrunk before uploading so large phone pictures don't slow things down. A **Representative photo** checkbox marks the image as a stand-in rather than the exact card.

Add a Single

Drag photos here, or use the buttons below

Add Photos

Take Photo

Search for Image

Title* · Category* · Price* · Subject · Set · Year · Card # · Description

Card details

Three fields are **required** (marked with *) and must be filled before you can save:

- **Title *** — e.g. "2003 LeBron James Topps Chrome RC #111"
- **Category *** — pick from the list (shown as "Top level > Category")
- **Price (\$) *** — must be greater than zero

Optional details: **Subject / Player**, **Set**, **Year**, **Card #**, and a free-text **Description**.

Condition & grading

Tick "**This card is professionally graded**" to switch this section between two modes:

If...	You fill in
Graded	Grader (PSA, BGS, SGC, or CGC), Grade (e.g. 10, 9.5), and Cert # .
Not graded	A single Condition field (e.g. "Near Mint," "Lightly Played").

Storefront flags

Tick any that apply: **Featured**, **New**, **On Sale**, **Limited**, and **Out of Stock**. These behave the same as the Inventory flags in Section 3.

Finally, click **Add Single** to publish (or **Cancel** to back out). You'll get a confirmation and be returned to the list.

4.3 Editing or deleting a single

Click the **pencil** on a row to reopen the same form pre-filled with everything you entered — including its photos — and change anything, then **Save Changes**. Click the **trash** to delete; you'll be asked to confirm, and this removes the card and its photos permanently.

COUNTER WORKFLOW

A new card in the case? On your phone: **Add Single** → **Take Photo** → type the Title, pick the Category, enter a Price → **Add Single**. It's live in under a minute.

5 Orders PREVIEW

The order-management screen — titled "Order Management" — is laid out for reviewing and fulfilling orders: a search box, an Export CSV button, and a table of orders with a fulfillment status and per-row actions.

THIS SCREEN IS A PREVIEW RIGHT NOW

The Orders table currently displays **sample rows** (order numbers like TR-10495 with May 2026 dates), and its **Search**, **Export CSV**, **Fulfill**, and **View** controls are placeholders that aren't wired up yet. Treat this page as a preview of the layout, not a live tool.

5.1 Where your real orders are today

Until this screen is connected to live data, your actual recent orders appear on the **Daily Dashboard** under "Recent Activity" (Section 2.2), which is wired to the real order database and shows order number, customer, status, and amount.

5.2 What the finished screen will offer

The layout previews the intended workflow, so you can see where things are headed:

Column / control	Intended use
Order ID	The order's reference number.
Date	When it was placed.
Customer	Who placed it.
Fulfillment	Status badge — e.g. Unfulfilled, Processing, Shipped.
Total	Order value.
Fulfill / View	Advance an order's fulfillment, or open its full details.
Export CSV	Download the order list as a spreadsheet.

6 Customers LIVE DATA

A read-only **Customer Directory** of everyone with an account, with their order history and loyalty standing rolled up. To actually create or change accounts, use the **Manage Users** link at top right (it takes you to Section 7).

6.1 The directory table

Column	Shows
Name / Email	The customer's name and email address.
Role	Whether they're a customer or an admin.
Total Orders	How many orders they've placed.
Lifetime Spent	Their total spend to date.
Loyalty Tier	A colored badge — Bronze, Silver, Gold, or Diamond.

If no one has registered yet, the table reads "No customers yet."

6.2 How loyalty tiers are decided

A customer's tier is set automatically from their loyalty points:

Tier	Loyalty points
Bronze	Under 250
Silver	250 – 999
Gold	1,000 – 4,999
Diamond	5,000 and above

You can adjust a customer's loyalty points on the Users screen (Section 7.3), which will move them between tiers.

7 Users & Staff LIVE DATA

The **User & Staff Management** screen is where accounts are actually created, edited, promoted, and removed. This is your control room for who can do what.

7.1 The toolbar

- **Search** — filter the user list by name or email.
- **Add User** — create a new account (see 7.2).

IF "ADD USER" IS GREYED OUT
Creating and deleting accounts requires an extra server key (the Supabase service-role key) to be configured. If it isn't, the **Add User** button and the delete action are disabled, and a notice explains this — but **role changes, profile edits, and password resets still work** without it.

7.2 Adding a user

1. Click **Add User**.
2. Enter an **Email** and a **Name**.
3. Set a **Temporary password** (minimum 6 characters) — the person can change it later.
4. Choose a **Role**: *customer*, or *admin (staff)* for someone who needs the portal.
5. Click **Create account**. (The button stays disabled until the email looks valid and the password is long enough.)

7.3 Managing existing users

Each row in the table offers:

Control	What it does
Role dropdown	Switch a person between customer and admin . The change takes effect immediately.
Edit (pencil)	Open a small dialog to change their Name and Loyalty points .
Password reset (key)	Emails the user a password-reset link.
Delete (trash)	Permanently removes the account after a confirmation.

The table also shows each person's loyalty points and the date they joined. Your own account is marked with a small **"you"** tag, and — as a safety measure — **you can't delete yourself**.

ONBOARDING A NEW STAFF MEMBER
Add User → set their email, name, and a temporary password → choose **admin (staff)** → Create account. Tell them to use the **Password reset** link (or the reset key on their row) to set their own password.

8 Integrations — Clover Payments SETUP

The **Integrations** screen connects the store to **Clover** for taking card payments. The whole thing runs off one switch: **Mock** (simulate everything, no account needed) or **Live** (real payments with real credentials).

8.1 Reading the status banner

A banner at the top tells you what's currently active:

Banner	Meaning
Phantom (mock) Clover	Payments are being simulated. This is the default and is safe — no real money moves.
LIVE Clover	Real Clover payments are active.
Set to Live but falling back to mock	You chose Live but a required credential (Merchant ID or API token) is missing, so it's safely staying in mock. Fill in the missing fields to go truly live.
Settings table not found	A one-time database migration hasn't been run yet, so saving and the Live toggle aren't available. Ask your developer to run it.

8.2 The Mock / Live switch

- **Mock (phantom)** — everything is simulated end-to-end. Leave it here while you set up or demo the store.
- **Live** — flip to this only once you've entered and tested real Clover credentials.

8.3 The credential fields

Field	What it is
Environment	Sandbox (testing) or Production (real money). Always start with Sandbox.
Merchant ID (mld)	Your Clover merchant identifier.
Platform API Token	Your Clover platform token. Stored securely — once set, it shows masked, and you can leave it blank to keep the current one.
Ecommerce Public Key (PAKMS)	The browser-side key used to tokenize card details.
Ecommerce Private Key	The server-side key used to charge cards. Also stored masked.

WHERE TO FIND THESE IN CLOVER

In your Clover Dashboard: **Setup** → **API Tokens** gives you the Merchant ID and Platform token; **Settings** → **Ecommerce** → **API Tokens** gives you the public and private ecommerce keys. Use the **Sandbox** environment first.

8.4 Testing and saving

1. Enter your credentials.
2. Click **Test Connection** — a success message confirms the keys work (and shows your merchant name); a failure explains what's wrong.

3. Click **Save Settings**.

4. Only after a successful test in Sandbox should you switch Environment to Production and the mode to Live.

UNTIL CLOVER IS LIVE, THE STORE CAN'T CHARGE REAL CARDS

In Mock mode, checkouts are simulated. Complete this screen with real Production credentials — and test them — before relying on the store to take real payments.

9 Quick Reference & Common Tasks

The everyday jobs, and exactly where to do each one.

I want to...	Go to
See today's sales and orders	Daily Dashboard
Mark an item out of stock	Inventory → the item's OOS toggle
Put an item on sale / feature it / badge it new	Inventory → Sale / Featured / New toggles
Change a product's price, name, or image	Inventory → Edit
List a new single card (with a photo)	Custom Inventory → Add Single
Remove a single card	Custom Inventory → the row's trash icon
Look up a customer's spend or tier	Customers
Create a staff (admin) account	Users → Add User → role <i>admin</i>
Make someone an admin (or remove admin)	Users → the Role dropdown
Reset a user's password	Users → the key icon
Adjust a customer's loyalty points	Users → Edit (pencil)
Connect / test card payments	Integrations
Clear out test/demo orders	Daily Dashboard → Delete demo orders (visible in Mock mode)

9.1 Where each screen's data is real

Screen	Status	Notes
Daily Dashboard	LIVE DATA	Sales, orders, stock, customers, and recent activity are all real.
Inventory	LIVE DATA	Full search/filter, flags, and editing. No add/delete here.
Custom Inventory	LIVE DATA	Full create / edit / delete with photo upload.
Orders	PREVIEW	Sample rows; controls not yet wired. Use the Dashboard for real orders.
Customers	LIVE DATA	Read-only directory with real order roll-ups.
Users	LIVE DATA	Add/delete need a server key; role/profile/reset always work.
Integrations	SETUP	Defaults to Mock; enter Clover credentials to go Live.

10 Troubleshooting & Glossary

10.1 Common issues

Symptom	What to do
I don't see the "Admin" button in the top bar	You're either not signed in or your account isn't an admin. Sign in with an admin account; if you should be an admin, have another admin promote you on the Users screen.
Going to /admin sends me to the sign-in or account page	Same cause — the server only lets signed-in admins in. Sign in as an admin.
"Add User" is greyed out	The server needs the Supabase service-role key configured to create/delete accounts. Role changes, edits, and password resets still work meanwhile. Ask your developer to set the key.
A flag toggle failed	You'll see a brief error. Check your connection and click the toggle again.
Custom Inventory rows show "No photo"	Those items were listed without an image. Open the row's editor and add a photo.
Integrations says "Settings table not found"	A one-time database migration hasn't been run. Payments stay in safe Mock mode until your developer runs it.
Real orders don't appear on the Orders screen	Expected for now — that screen is a preview. Real orders show on the Dashboard's "Recent Activity."

10.2 Glossary of store flags

Flag	Meaning on the storefront
Sale	Item is marked as on sale.
Featured	Item is promoted in featured spots.
New	Item carries a "new release" badge.
Limited	Item carries a "limited" badge (set on singles).
Out of Stock (OOS)	Item shows an out-of-stock badge and can't be added to the cart.
Representative image	The photo is a close stand-in, not the exact item; shoppers see a note saying so.

10.3 Product types

Type	What it means
Sealed Boxes	Unopened, sealed product (hobby boxes, blasters, etc.).
Singles	Individual, non-sealed cards in a card category (sports / TCG).

Supplies & Extras Everything else — accessories, supplies, and non-card items.

10.4 Loyalty tiers

Tier	Points needed
Bronze	Under 250
Silver	250 – 999
Gold	1,000 – 4,999
Diamond	5,000+

About this manual. This guide documents the Top Rated admin portal as deployed at the time of writing (July 12, 2026). Screens marked **PREVIEW** or **SETUP** are expected to gain full functionality in later updates; when they do, their behavior will match the workflows previewed here. If a screen looks different from this manual, it has likely been updated — check for a newer edition.
